# MIAMI

## An innovative interpretation of the traditional wine cabinet

With improved lighting, the Miami unit offers the ultimate wine bottle display. LED lights are embedded all along the front door frame and the internal finishing creates depth and pleasant lighting effects, while enhancing the visibility of wine bottles. Energy consumption is significantly reduced given the LED lighting and a new refrigeration system, which is controlled by an automatic device that enhances its efficiency. The product's insulation is improved by 2.36" thick panels. The door is made of 1.1" thick low emission double-glazing glass. The glass panel is embedded in a frame with magnetic gaskets. Inside the unit, the arrangement of bottles is entirely adjustable. It is possible to insert steel tubes, elegant pull-out drawers or stainless steel shelves.

### Visibility

LED lighting along perimeter of the door, combined with the finishing of the internal walls, ensure the ultimate bottle display.

### Energy efficiency

Up to 50% less energy consumption in comparison to traditional wine cabinets due to the LED lighting, 2.36" thick insulation and the low emission double glazing glass door.

### Noise

The static condensation system is designed to provide maximum noise reduction of the refrigeration equipment.

### Internal system

The innovative static refrigeration system ensures the right temperature without the need for an evaporator. The bottle capacity is increased and the finishing of the internal walls provide a 360° view effect.

### Internal layout

Bottles can be displayed vertically (stainless steel shelves: SH), on an incline (stainless steel tubes: T) or horizontally (pull-out drawers: DR), according to individual preferences.

### Temperature

Fan assisted refrigeration. It is possible to switch off the fans to obtain static refrigeration and different temperatures. The static refrigeration operating mode provides four different temperature zones in one unit. Both red and white wines can be maintained at the most suitable temperature. The temperature can be set anywhere from 39°F to 68°F.

### Colour options

The wood laminate body is available in both semi-glossy black and brushed aluminium grey. The unit's door frames are made of anodized aluminium in silver or black. Other colour options are available upon request. (Door frame remains black, silver or white)

Brushed Aluminium Grey
